

ARM ACCESSORIES

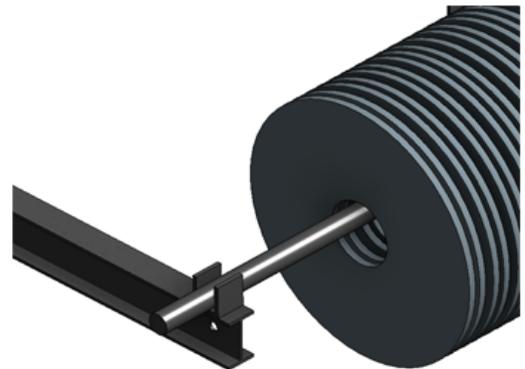

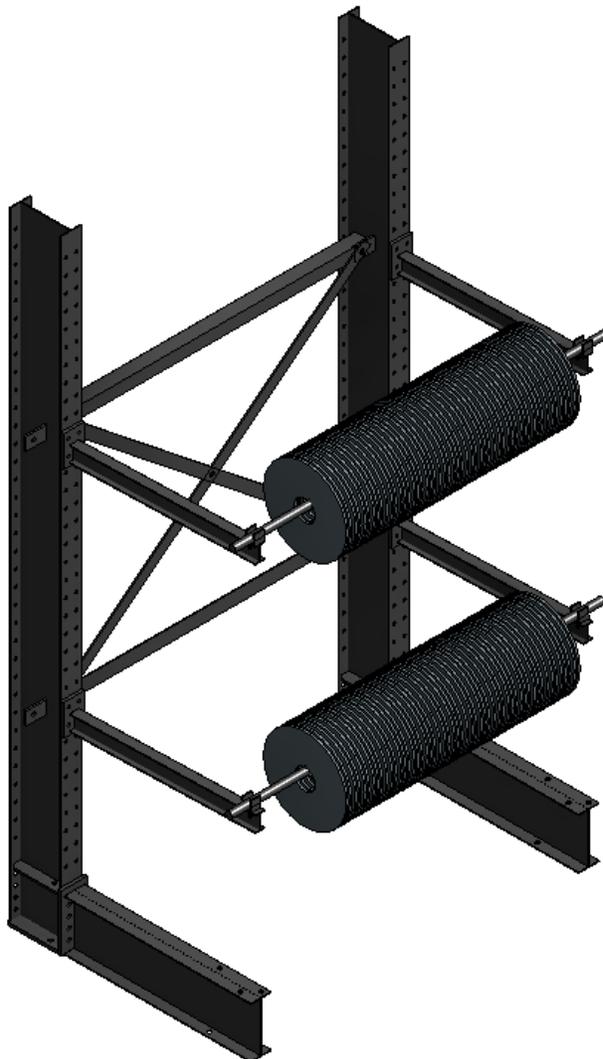

Description

Two arm accessories are available to support material. The first is a welded "V" bracket, which is welded along the entire length of the rack arm along the top flange. The "V" brackets are primarily designed for coils. The second arm accessory is the "U" bracket, which is a bracket welded to the top flange of the rack arm. A rod is extended along the two cantilever arms and slotted into the brackets, which acts as a support to carry rolled material. The arms are powder coated Cogan grey.

U BRACKET CONNECTED TO STRUCTURAL CANTILEVER ARM

U-BRACKETS

WELDED U BRACKET
REQUIRES METAL ROD WHICH SPANS THE DISTANCE BETWEEN COLUMNS
